

Only insights from MammaPrint® + BluePrint® can confidently guide ten years of ESBC treatment planning.

Confidently and quickly establish a personalized treatment plan for your patients*, ranging from neoadjuvant chemotherapy decisions to extended endocrine therapy, by utilizing MammaPrint + BluePrint results obtained within six days.^{1†}

ESBC = Early-stage breast cancer

*Women 18 years or older with early-stage breast cancer

† Agendia is committed to delivering results in less than 10 business days, and results are provided within 6 business days for the majority of cases.

5 Utility of the 70-gene MammaPrint assay for prediction of benefit from extended letrozole therapy (ELT) in the NRG Oncology/NSABP B-42 trial. Priya Rastogi et al. Abstract, Journal of Clinical Oncology 39 no. 15. May 20, 2021. 502-502. https://doi.org/10.1200/JCO.2021.39.15_suppl.50

Results should be taken in the context of other relevant clinico-pathological factors and standard practice of medicine.

Functional Genomic Profiling with MammaPrint® + Blueprint®

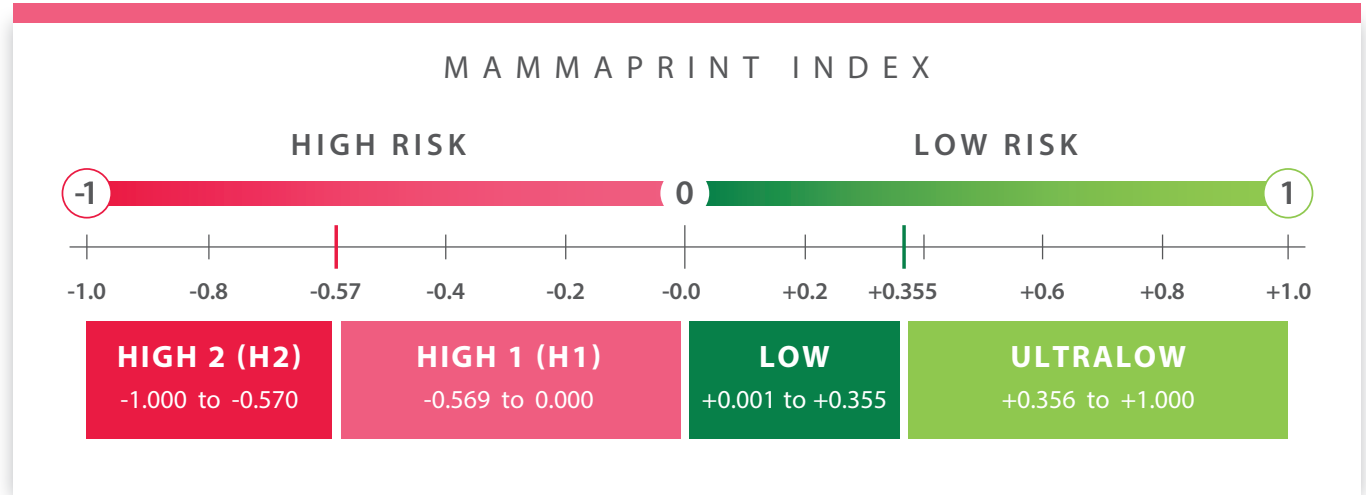

With the combined insights of MammaPrint + Blueprint alongside clinical factors, physicians gain a more comprehensive basis for predicting prognosis and the benefit of specific treatments.

Learn the likelihood of a patient's breast cancer recurring.

Determine the underlying genomics driving the growth of a tumor.

BASAL-TYPE	HER2-TYPE	LUMINAL-TYPE
High Risk Basal-type (ER-)	Low Risk HER2-type	Low Risk Luminal-type A
High Risk Basal-type (ER+)	High Risk HER2-type	UltraLow Risk Luminal-type A
		High Risk 1 Luminal-type B
		High Risk 2 Luminal-type B

A more complete understanding of each woman's breast cancer to enable optimized treatment planning.
